

Dear Young People & Eco-Advocates,

Here's a stunning environmental fact:

Residential and commercial buildings in the US account for 40% of carbon dioxide emissions and they consume 41% of all generated energy! It does not have to be this way.

Did you know that the healthiest office building¹ in Philadelphia is 2.0 University Place in University City? Today, plans are in place to build 3.0 University Place at 41st and Market and it will be THE healthiest office building in the United States.

Shouldn't this be the standard here and now? If we work together, we can make a difference; make a statement; make an impact. Help make Philly the most environmentally progressive city in the U.S.!
